A new resource for supporting clinical research.

The Clinical Research and Trials Office (CRTO) has a mission to establish a collaborative and integrative environment for the design and conduct of clinical research and clinical trials to advance preventive and therapeutic interventions benefiting the health of Iowans and the nation.

FOR RESEARCHERS

The CRTO will support all aspects and phases of clinical research and strives to improve access to resources and eliminate bottlenecks in processes. Investigators have the option to leverage CRTO services for selected portions of a project as needed or as a complete resource from project conception through completion.

FOR RESEARCH SUPPORT UNITS

The CRTO wants to collaborate with you by establishing referral processes and addressing gaps in the existing research support infrastructure.

The CRTO is under development.

The CRTO will build on existing capabilities such as:

- The clinical research unit
- The clinical coordinator core
- Expanded support for clinical trials components including IRB, regulatory, budgeting, contracting, design, recruitment, and reporting
- Other ICTS cores (ICTS core website here)

CRTO is developing new capabilities including:

- Integrated and comprehensive data management for clinical trial administration and execution
- Increased access to clinical trial expertise
- New investigator startup

Ongoing development and collaboration

- Phase 1 of the CRTO should go live by end of CY 2020
- We plan to work across campus with existing centers and support units
- As we develop, we will engage the community. Contact us to get involved as we grow.

CONTACT US FOR HELP WITH YOUR CLINICAL RESEARCH

We are providing support as we develop the CRTO. For support contact us at:
