

emrU: Heads Up! Epic upgrade & database refresh coming soon!

emrU newsletter, June 2017, by [Deb Brastrom](#)

emrU: Epic upgrade week of July 16

EMRU is undergoing a double-upgrade from Epic version 2014 to version 2015 to the latest version 2017 the week of July 16, 2017. The upgrade will require a down time of approximately one day. The exact date is TBD and will be communicated by email and the Message of the Day that is displayed when you log in to emrU.

The Epic upgrade updates the actual Epic code, but not the EMRU database. Users will still have access to emrU and your fake patients will still be available after the upgrade. Users will notice an upgraded look to the Hyperspace user interface and Epic 2017 will bring new features, additional functionality, and refinements to the clinical experience.

EMRU: database refresh weeks of July 23 and July 30

Hot on the tail of the Epic upgrade, we will be doing our annual EMRU database refresh the weeks of July 23 and July 30, 2017. This is the time when we wipe out all access to emrU and all your fake patients and start clean.

You will need to:

- **resubmit the list of people you would like to have access to EMRU using the spreadsheet at [emrU access template.xlsx](#) .**
- **let Deb Brastrom know which fake patients you would like to have reinstated.**
